

Technique is a leader in the supply of solid waste containers and collection vehicles to municipalities in **Oman**. **Technique** is also a leader in the field of medical waste management and has built and operates the Ministry of Health's first Medical Waste Treatment Plant (MWTP) at Al Multaqa, near Al Amerat, which handles all waste for MOH hospitals and clinics in the Muscat area.

Technique is proud to have introduced the **MOLOK** Deep Waste Collection System; the first environmentally friendly solid waste management system, to **Oman**. **MOLOK** waste collection containers are quite different from the standard waste containers seen on the streets of Muscat; they are a fixed item in that they are 60% buried under the ground. This factor gives **MOLOK** all its superior features: **huge volume for the space used, clean, hygienic and odor free, safe, animal proof and vermin free and aesthetically pleasing.**

MOLOK containers come in a range of sizes from 300 to 5,000 litres and have number of different finishes and colours. These come in wood, aluminium and recycled plastic.

MOLOK containers have a wide variety of applications: residential areas, hotels, restaurants and resorts, hospitals, office blocks, parks and car parks, shopping malls and schools. In fact they can be found almost everywhere.

MOLOK containers are ideal for recycling. They fit together well to form recycling banks and because of their great capacity they take up less space than conventional bins.

MOLOK provides lids with different colours, signs and apertures for different kinds of recyclable waste.

Technique has a large fleet of specialist collection vehicles which serve the MOH and MWTP and also the increasing family of **MOLOK** users. **MOLOK** containers can be found in most of Oman's prestigious hotels and resorts.

MOLOK containers are emptied by a vehicle mounted crane. This lifts out an inner lifting bag with a quick release mechanism to discharge the waste, which is sealed in another inner disposable plastic waste bag.

MOLOK is a revolution in waste management and its introduction to **Oman** by **Technique** brings waste collection into the 21st Century
